

NET-METERING PROGRAM

What is Net-Metering?

Net-Metering is a cost-effective way to take control of your electricity bills while contributing to a greener environment. If you have a solar power system or any RE technology installed at your home or business, Net-Metering allows you to send any excess electricity you generate back to the CEBECO I Distribution System—and get credited for it.

How Does Net-Metering Work?

1. **Generate Power:** Your RE technology generate electricity during operating hours.
2. **Use What You Need:** This power is first used to meet your own electricity needs.
3. **Feed the Excess:** Any surplus power is automatically fed back into the CEBECO I Distribution System.
4. **Get Credited:** Your Bi-directional meter records the exported energy, and you receive credits on your electricity bill.

These credits reduce your monthly energy costs and you can even carry forward unused credits to your succeeding billing cycles.

Benefits of Net-Metering

- ✓ **Lower Electricity Bills** – Save significantly by reducing your dependency on CEBECO I supply of electricity.
- ✓ **Faster ROI** – Shorten the payback period of your solar system investment.
- ✓ **Energy Independence** – Generate your own power and rely less on fluctuating generation rates.
- ✓ **Eco-Friendly** – Reduce your carbon footprint and support renewable energy use in your community.

Who Can Avail Net-Metering?

Net-Metering is ideal for:

- Residential and commercial customers with renewable energy systems (up to 100kW)
- Qualified end-users who meet the technical standards set by the Energy Regulatory Commission (ERC), Department of Energy (DOE), Philippine Electrical Code (PEC) & Philippine Distribution Code (PDC).

Take the First Step Today!

Ready to lower your electricity bills and switch to clean energy? Net-Metering is a smart choice for both your wallet and the planet.
